VoiceBridge

YOUR VOICE. YOUR LANGUAGE. YOUR RIGHTS.

Solution overview

VoiceBridge is a bilingual, AI-powered voice assistant that helps people access information about government schemes and public services in English and Tamil. Users can type a question, speak through a microphone, or upload an audio recording. The application generates a simple response in the selected language and can read that response aloud.

The problem

People may find public-service information difficult to access because of language barriers, text-heavy information, or limited confidence using digital services. This can make it harder to understand where to find information and what steps to take.

How VoiceBridge helps

English and Tamil Choose a preferred language for questions and answers.	**Speech-to-text** Convert spoken questions and uploaded audio into text using Gnani STT.
AI-generated responses Receive concise, easy-to-understand answers with Google Gemini.	**Text-to-speech** Listen to generated answers using Gnani TTS voices.

Technology used

Frontend: HTML, CSS and JavaScript **Backend:** Python and Flask
Voice services: Gnani Speech-to-Text (STT) and Text-to-Speech (TTS) **AI responses:** Google Gemini

Expected impact and future scope

VoiceBridge aims to reduce language barriers and make public-service information more approachable for people who prefer speaking or listening. Future improvements could include additional Indian languages, integration with verified official government sources, and further accessibility features.

Important: VoiceBridge provides general informational responses, not official decisions. Users should verify eligibility, benefits, required documents and deadlines with the relevant government department or official website.
